

## Search & Rescue Course (1 day)

The potential of talented and dedicated staff is enhanced by high-quality safety training. Learning systems for search and rescue, risk assessment skills, and incident management are complimented by the softer skills of client management, environmental impact and communication. With the added benefit of being able to combine this with remote forest first aid courses Fieldskills can assist managers of remote forest staff to implement high standards of safety and operation.

Our training methods are very much skills based and include a lot of practical exercises and scenario work. Team building is an added bonus to this experiential learning as most incident management involve teamwork to resolve successfully. Bespoke courses tailored to your organisation can be developed. We run bespoke training courses for forest workers, for example, rangers, professional guides, scientists and research assistants.

Our standard search & rescue course is 1 day although other subjects can be included to make it a 2 day course.

### **The following elements can be covered:**

- Navigation (jungle specific)
- Search & Rescue
- River crossings and river safety
- Remote evacuation
- Jungle hazards
- Boat safety
